Purpose of Contact: IHSS Group NE/NW – PAC 1412 (T-12) additional samples

Discussion

PAC NE-1412, Trench 12, was recently sampled and 2 locations along the northern edge of the trench exceeded the Tier 1 action levels for tetrachlorethene (PCE). The concentrations at the western location were:

Location	Description	Depth	Concentration
CV41-004	western location	2.5–4.5	72,000 ug/kg
		4.5-6.5	72,000 ug/kg
CV-41-006	eastern location	0.5-2.5	6,100 ug/kg
		2.5-4.5	5,600 ug/kg

There are also sporadic hits above Tier 2 action levels of trichloroethene, 1,1,2,2-tetrachloroethane, pentachlorophenol, benzo(A) anthracene and benzo(A)fluoranthene and dibenz(A,H)anthracene although none approach Tier 1 action levels.

To better define the extent of contamination, samples will be collected from 4 additional geoprobe holes at the following locations:

- Northwest of the location with the highest PCE concentration on the same grid row and at the same grid spacing
- Northeast of the location with the highest PCE concentration at ½ the grid spacing
- Northeast of the 2nd location at ½ the grid spacing to the northeast and ½ the grid spacing to the southeast
- Northeast of the 2nd location at ½ the grid spacing to the southeast and ½ the grid spacing to the southwest

Samples will be analyzed for VOCs and SVOCs. These samples should effectively define the extent of contamination at Trench 12.
